

Step-by-Step Guide:

Deploy a React Frontend using **Azure Static Web Apps**

Prerequisites (What You Need Before Starting)

1. A GitHub account (free) → <https://github.com>
 2. A free Microsoft/Azure account → <https://azure.microsoft.com/free/>
 3. Node.js installed on your computer → <https://nodejs.org> (LTS version)
 4. A React app
-

Flow:

ReactApp → GitHub Repo → AzureStaticWebApp

Step 1: Create React App

- Create your React App and make sure that all required functionality implemented.
- **Note:** Update/Add the required env variables like API_URLS, TOKEN_KEY etc...

Step 2: Push Your React App to GitHub

1. Log into GitHub → click "New repository"
2. Name it **my-azure-react-app** (or anything), keep it Public or Private (both work)
3. In your terminal (inside the project folder):

```
git init
git add .
git commit -m "first commit"
git branch -M main
git remote add origin https://github.com/YOUR-USERNAME/my-azure-react-app.git
git push -u origin main
```

Done! Your code is now on GitHub.

Step 3: Deploy with Azure Static Web Apps (Super Easy Way)

1. Go to <https://portal.azure.com>
2. Search for "Static Web Apps" → click it → "Create"
3. Fill in the form (beginner friendly):
 - Subscription: Free Trial (or whatever you have)
 - Resource Group: Create new → **my-static-apps-rg**
 - Name: anything unique, e.g. **my-first-react-app**

- Plan type: Free (perfect for learning)
- Source: GitHub
- Click "Sign in with GitHub" and authorize Azure

4. Now fill the build details:

- Repository: your username / my-azure-react-app
- Branch: main
- Build Presets: Choose **React** ← this auto-fills everything!

You will see:

- App location: /
- Output location: **build**
- App artifact location: leave blank

5. Click "Review + Create" → "Create"

This Step will take some time to create Resource.

6. When it finishes, click "Go to resource" → click the URL (something like <https://kind-sky-0a1b2c3d.azurestaticapps.net>)

Your React app is live on the internet!
